MEMORANDUM

SUBJECT: Chemical and Allied Industries, THE PLANNING
MANUAL, VOL. III

Received by: Petroleum Branch, Materials
Division, ORR

1. Sections on Gathering, Transportation and Storage of
Petroleum and Natural Gas pages 56 to 63.

a. p. 57 - Add at bottom of page:

In some fields, particularly in newly discovered field where gas pipeline outlets have not been built, natural gas may be burned in flares. If natural gasoline extraction plants have not yet been built, the "wet" natural gas containing natural gas liquids is burned at flares near field separators. Where natural gasoline extraction plants are in operations, the "dry" tail gas is burned in a large flare near the plant.

This section appears to be adequate within the scope defined in statement of project.

STATINTL

From the desk of

7-21-52

I think this may well
close. A few points
& statements might be (A)
critical, but they are
negligible - A point. The
photos & diagrams are well
selected - A lot of work
& thought put into this -
Only thing, it takes 7
lot of labor as 4-5 hours,
& would be a good guide for
our friends to use against us.
Would like to let the friends
they have undoubtedly put out -
etc.

1. Section 6., Gathering, Transportation and Storage of Petroleum and Natural Gas pages 56 to 63.

(B) p. 57 - Add at bottom of page -

In some fields, particularly in newly discovered field where gas pipeline outlets have not been built, natural gas may be burned in flares. If natural gasoline extraction plants have not yet been built, the "wet" natural gas containing natural gas liquids is burned at flares near field separators. Where natural gasoline extraction plants are in operation, the "dry" tail gas is burned in a large flare near the plant.
